MPI COMPENSATION RATE INCREASE

March 8, 2010 – Last September Manitoba Public Insurance reviewed its existing rate structure and increased compensation rates for municipal fire departments responding to accidents. This increase was largely a result of the AMM's lobbying efforts and the work of the MPIC Review Committee.

At that time MPI also committed to annual increases to the rates effective March 1st of each year, based on the prior year's Consumer Price Index (CPI) plus 1% annually, across the board.

Therefore, effective March 1, 2010, the basic call rate has increased from **\$658** to **\$669**, and the complex call rate has increased from **\$877** to **\$891**, based on the 2010 Manitoba C.P.I. rate.

The AMM is pleased with this increase and will continue to work on other areas of concern regarding MPI, such as false alarms due to 911 calls and the need for financial compensation for traffic control at accident scenes.
