

Flexible FLEXPOST NEW FROM AIRMASTER SIGNS

A constant headache for municipalities' maintenance crews is the constant, costly replacement of sign posts that have been torn from their anchors by vehicles, vandals, high winds, etc. Airmaster Signs is proud to provide a cure for this headache with its new FLEXPOST Standard Signpost System featuring FLEXPOST's unique base plate and spring technology.

The revolutionary FLEXPOST system has numerous advantages over its competitors including:

- **Toughness** – FLEXPOST's signposts are made entirely of impact-resistant steel and meet ADA requirements. Besides vehicle impacts, these products can also withstand extreme winds (wind

test approved for 75 mph gales).

- **Pedestrian Safe™** - FLEXPOST's products offer a unique delineation feature if struck at high speeds and guaranteed flexibility if they are just bumped into.
- **Help's maintain property's original appearance** – All signs get bumped into over time, especially in parking lots. Only FLEXPOST signs maintain their original shape over time – guaranteed!
- **Cost savings** – FLEXPOST completely eliminates both expensive man hours of replacement time demanded by rigid posts and damage done to parking lot surfaces during those replacements. Their maintenance-free finish means the products last even longer. Finally, FLEXPOST products can reduce a municipality's liability costs.

For more information, call Airmaster Signs at 204-944-7446 or 800-788-6805; or visit the company's brand new website at www.airmastersales.com.

Canada Culvert offers THE GREEN GEOTEXTILES

The Green Geotextiles® available from Canada Culvert (formerly Westman Steel) are actually green in colour and produced using 100% post-consumer, 're-wettable' polyester fibre extracted from recycled plastic bottles. This re-wettable feature, unique to non-woven Green Geotextiles®, provides excellent long-term performance.

These products in non-woven format provide tensile reinforcement, filtration and separation for roads, roofs, railroads, ponds, dams, trenches, landfills and more. Woven products, meanwhile, provide stabilization and reinforcement of soft soils, retaining walls, roadways and embankments.

The Green Geotextiles® deliver high water flow rates while providing superior

soil retention. Their physical properties are consistent with standard geotextiles and can withstand the stress of installation, offering high resistance to punctures, tears, insects and soil chemicals.

Polyester also provides excellent UV stability. The fabric is virtually unaffected by hydrocarbons, mildew, rot, and freeze-thaw cycles.

Its use can speed construction, reducing overall costs and increase the life-span of both paved and unpaved areas.

And another big selling feature is that The Green Geotextiles® can be used for LEED credits and certification.

For more information, call **Bob Omeniuk**, Regional Sales Manager at Canada Culvert: 204-222-7354. Interested readers can also visit the company's website at www.canadaculvert.com.
